

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

**Claim 1. (currently amended)** An organic electroluminescence element material comprising a platinum complex having a platinum ion and a ligand comprising an aryl group of which free rotation is blocked or an aromatic heterocycle group of which free rotation is blocked, wherein the platinum complex is an ortho-metallated complex,

wherein the ortho-metallated complex is selected from the group consisting of:

~~a platinum complex represented by Formula (3) or a tautomer of a compound represented by Formula (3);~~

~~a platinum complex represented by Formula (4) or a tautomer of a compound represented by Formula (4);~~

a platinum complex represented by Formula (6) or a tautomer of a compound represented by Formula (6);

a platinum complex represented by Formula (7) or a tautomer of a compound represented by Formula (7); and

a platinum complex represented by Formula (8) or a tautomer of a compound represented by Formula (8):

Formula (3)

wherein  $R_5$  and  $R_6$  each represent a hydrogen atom or a substituent selected from following Group A;  $Z_3$  represents a group of atoms necessary to form an aromatic hydrocarbon ring or an aromatic heterocycle;  $n_3$  represents an integer of 1 or 2, provided that, when  $n_3$  is 1, L3 represents a bidentate ligand;  $p_3$  represents an integer of 0-3; and  $q_3$  represents an integer of 0-4,

Formula (4)

wherein  $R_1$  and  $R_2$  each represent a hydrogen atom or a substituent selected from following Group A, provided that at least one of  $R_1$  and  $R_2$  is a substituent selected from following Group A;  $R_3 - R_{13}$  each represent a hydrogen atom or a substituent selected from following Group A;  $n_4$  represents an integer of 1 or 2, provided that, when  $n_4$  is 1,  $L_4$  represents a bidentate ligand;  $p_4$  represents an integer of 0 - 3; and  $q_4$  represents an integer of 0 - 4,

Formula (6)

wherein  $R_{16}$  and  $R_{17}$  each represent a hydrogen atom or a substituent selected from following Group A, provided that at least one of  $R_{16}$  and  $R_{17}$  is a substituent selected from following Group A;  $R_{18} - R_{22}$  each represent a hydrogen atom or a substituent selected from following Group A;  $n_6$  represents an integer of 1 or 2, provided that, when  $n_6$  is 1,  $L_6$  represents a bidentate ligand;  $p_6$  represents an integer of 0 - 3; and  $p_7$  represents an integer of 0 - 4,

Formula (7)

wherein  $R_{23}$  and  $R_{24}$  each represent a hydrogen atom or a substituent selected from following Group A;  $Z_5$  represents a group of atoms necessary to form an aromatic heterocycle containing a nitrogen atom;  $n7$  represents an integer of 1 or 2, provided that, when  $n7$  is 1, L7 represents a bidentate ligand;  $p8$  represents an integer of 0 - 3; and  $q6$  represents an integer of 0 - 4, and

Formula (8)

wherein  $R_{25}$  and  $R_{26}$  each represent a hydrogen atom or a substituent selected from following Group A;  $Z_6$  represents a group of atoms necessary to form an aromatic heterocycle containing a nitrogen atom;  $n_8$  represents an integer of 1 or 2, provided that, when  $n_8$  is 1,  $L_8$  represents a bidentate ligand;  $p_9$  represents an integer of 0 - 3; and  $q_7$  represents an integer of 0 - 4,

Group A:

an alkyl group, a trifluoromethyl group, an aryl group and an aromatic heterocycle group, wherein these groups may further be substituted.

**Claims 2 to 11. (canceled)**

**Claim 12. (previously presented)** The organic electroluminescence element material of claim 1, wherein the aryl group of which free rotation is blocked is an aryl group having an electron donating substituent.

**Claim 13. (previously presented)** The organic electroluminescence element material of claim 1, wherein the aromatic heterocycle of which free rotation is blocked is an aromatic heterocycle having an electron donating substituent.

**Claim 14. (original)** An organic electroluminescence element comprising the organic electroluminescence element material of claim 1.

**Claim 15. (currently amended)** An organic electroluminescence element comprising [[a]] an emission layer as a constituting layer, wherein the emission layer comprises the organic electroluminescence element material of claim 1.

**Claim 16. (original)** The organic electroluminescence element of claim 15, wherein the emission layer comprises a compound represented by Formula (10):

Formula (10)

wherein  $R_1$ ,  $R_2$ ,  $R_3$  and  $R_4$  each represent a hydrogen atom or a substituent;  $n_1$ ,  $n_2$ ,  $n_3$ , and  $n_4$  each represent an integer of 0 - 4; and  $Ar_1$  and  $Ar_2$  each represent an arylene group or a divalent aromatic heterocycle group; and  $L_{01}$  represents a divalent linking group.

**Claim 17. (previously presented)** The organic electroluminescence element of claim 15, wherein the emission layer comprises a compound represented by Formula (11):

Formula (11)

wherein R<sub>5</sub> - R<sub>16</sub> each represent a hydrogen atom or a substituent, provided that one of R<sub>13</sub> - R<sub>16</sub> represents a substituent; and n<sub>5</sub> - n<sub>8</sub> each represent an integer of 0 - 4.

**Claim 18. (previously presented)** The organic electroluminescence element of claim 15, wherein the emission layer comprises a carboline or a carboline of which one of carbon atoms of a hydrocarbon ring constituting a carboline ring of the carboline is replaced with a nitrogen atom.

**Claim 19. (previously presented)** The organic electroluminescence element of claim 15 further comprising a hole blocking layer as a constituting layer, wherein the hole blocking layer comprises a carboline or a carboline of which one of carbon atoms of a hydrocarbon ring constituting a carboline ring of the carboline is replaced with a nitrogen atom.

**Claim 20. (original)** The organic electroluminescence element of claim 15 further comprising a hole blocking layer as a constituting layer, wherein the hole blocking layer comprises a boron derivative.

**Claim 21. (previously presented)** The organic electroluminescence element comprising an emission layer and a hole blocking layer as constituting layers, wherein the emission layer and the hole blocking layer each comprise the organic electroluminescence element material of claim 1; and the hole blocking layer further comprises a carboline or a carboline of which one of carbon atoms of a hydrocarbon ring constituting a carboline ring of the carboline is replaced with a nitrogen atom.

**Claim 22. (original)** The organic electroluminescence element comprising an emission layer and a hole blocking layer as constituting layers, wherein the emission layer and the hole blocking layer each comprise the organic electroluminescence element material of claim 1; and the hole blocking layer further comprises a boron derivative.

**Claim 23. (previously presented)** A display device comprising the organic electroluminescence element of claim 1.

**Claim 24. (previously presented)** An illumination device comprising the organic electroluminescence element of claim 1.

**Claims 25 to 27. (canceled)**

**Claim 28. (previously presented)** The organic electroluminescence element material of claim 1, wherein the ortho-metallated complex is a platinum complex represented by Formula (6) or a tautomer of a compound represented by Formula (6).

**Claim 29. (previously presented)** The organic electroluminescence element material of claim 1, wherein the ortho-metallated complex is a platinum complex represented by Formula (7) or a tautomer of a compound represented by Formula (7).

**Claim 30. (previously presented)** The organic electroluminescence element material of claim 1, wherein the ortho-metallated complex is a platinum complex represented by Formula (8) or a tautomer of a compound represented by Formula (8).
